

SpiroConnect Spirometer

The most accurate, comprehensive and simple to use spirometry solution available

SpiroConnect uses proven turbine technology but with a new and innovative enhancement, making it more sensitive to low flow rates than any other turbine spirometer and ideal for Asthma and COPD patient testing. It offers full integration with the EMIS, TPP SystemOne and InPS Vision clinical systems, and is supplied with all required software and accessories, and a 2 year warranty.

Safer, Faster, Easier- I³ Integration

SpiroConnect is compatible with Numed's I³ integration software*, which automatically retrieves a patient's details from EMIS, TPP SystemOne or InPS Vision and files a PDF report and up to 40 spirometry Read codes in a single click upon test completion to their medical record.

This offers a number of benefits to both you and your patients:

Enhances Patient Care

Dramatically simplifies the spirometry test procedure, allowing you to concentrate on caring for your patients

Improves Patient Safety

Ensures test results are always filed to the correct medical record, improving patient safety

Improves Quality

Files a high quality spirometry report rather than a poor quality scan, for a more accurate diagnosis

Reduces Administration

Eliminates manual data entry, scanning and attachment of test results, giving you more time with your patients

See I³ in action on our website: www.numed.co.uk/i3

What do our customers think?

“The new SpiroConnect spirometer has been a great addition to our medical inventory. It is easy to store, easy to use and saves a significant amount of time for both the nurse and the admin team. The reports and Read codes are always entered instantly and correctly which has improved patient safety ensuring no lost or illegible reports. I would definitely recommend the product and the excellent support and customer service provided by Numed.”

Iain Date, Practice Manager - Cape Road Surgery

Peace of mind - MediServe Support

Faulty diagnostic equipment can be a major inconvenience, leading to delays in consultations and even the cancellation of appointments. SpiroConnect is supplied with our unique MediServe support package**, which includes:

- Unlimited technical support from a dedicated support team
- Full equipment repair cover including parts and labour
- Loan equipment when yours is being serviced or repaired
- Full annual service and calibration to manufacturer's specification

This will give you the peace of mind that your service will continue to run smoothly no matter what may happen.

Confidence in your new equipment – Installation & Training

It is vital that you are confident in the use of your new diagnostic equipment. For a small fee our dedicated customer support team can:

- Install your new product at a date and time that is convenient for you and in as many consulting rooms as you require
- Ensure you get the most out of your new device through a wide range of training options, including training videos in our dedicated support section, remote webinar sessions and on-site training*** if required
