

Cardioline HD+ ECG System

A lightweight, wireless and easy to use 12 Lead ECG system

Cardioline HD+ is ideal for the busy GP surgery requiring a wireless ECG system suitable for a wide variety of clinical situations. It offers full integration with the EMIS, TPP SystmOne and Vision clinical systems. HD+ is supplied with all of the required software and accessories and a 3 year warranty.

Safer, Faster, Easier- I³ Integration

HD+ is compatible with Numed's I³ integration software*, which automatically retrieves a patient's details from EMIS, TPP SystmOne or Vision and files a PDF report and ECG Read code upon test completion to their medical record.

This offers a number of benefits to both you and your patients:

Enhances Patient Care

Dramatically simplifies the ECG test procedure, allowing you to concentrate on caring for your patients

Improves Patient Safety

Ensures test results are always filed to the correct medical record, improving patient safety

Improves Quality

Files a high quality ECG report rather than a poor quality scan, for a more accurate diagnosis

Reduces Administration

Eliminates manual data entry, scanning and attachment of test results, giving you more time with your patients

What do our customers think?

“The device places its data seamlessly into the patient's medical record, which allows me to spend more time nursing and managing my patients.”

Lyn Orr, Practice Nurse - Annandale Medical Centre

Peace of mind - MediServe Support

Faulty diagnostic equipment can be a major inconvenience, leading to delays in consultations and even the cancellation of appointments. HD+ is supplied with our unique MediServe support package**, which includes:

- Unlimited technical support from a dedicated support team
- Full equipment repair cover including parts and labour
- Loan equipment when yours is being serviced or repaired
- Full annual service and calibration to manufacturer's specification

This will give you the peace of mind that your service will continue to run smoothly no matter what may happen.

Confidence in your new equipment – Installation & Training

It is vital that you are confident in the use of your new diagnostic equipment. For a small fee our dedicated customer support team can:

- Install your new product at a date and time that is convenient for you and in as many consulting rooms as you require
- Ensure you get the most out of your new device through a wide range of training options, including training videos in our dedicated support section, remote webinar sessions and on-site training*** if required
